## CAREER OBJECTIVE

My objective as a web developer is to build user-friendly, fascinating web applications that improve the user experience and promote corporate success. I'm keen to learn new things, experiment with new technology, implement creative ideas, deliver high-quality results and contribute to company success.

## SKILLS

Expertise: HTML | CSS | Tailwind | Bootstrap | JavaScript | ES6 | React  
Comfortable: Firebase Authentication | MongoDB | JWT | React-Router | Dotenv  
Familiar: Node | ExpressJs  
Tools: Git | Gitbas | Figma | Vercel | VS Code | Github

## PROJECTS

### • TrusToy [Live Link](#) | Github > [Client](#) | [Server](#)

Technologies: ReactJs, TailwindCss, DaisyUI, Firebase Authentication, ExpressJs, MongoDB.

- TrusToy has been decorated well, providing a unique design. It has been designed keeping in mind of children. Some attractive animation are showed when it scrolled on. Firebase authentication is used here for the privacy of user information to be more secure.
- TrusToy allows user to view their posted toys to sell. They also can update and delete their toy. But any user can't access to edit and delete other products. All the Users can show all the toys which were posted for sale by the sellers and show all on the All Toys page.
- Users can not add any product without login. They can log in two ways: Google and Email with a Password. Once logged in they can add and update anything.

### • Bengle CheFy [Live Link](#) | Github > [Client](#) | [Server](#)

Technologies: ReactJs, TailwindCss, DaisyUI, Firebase Authentication, ExpressJs.

- Bengle CheFy is a web application that has the best chef details profiles. Not only that, but also here they show all chef's unique recipes, through which they can be hired successfully.
- The user will first see a beautiful home page that has given a short description of the chef with his professionalism. Until a user logs in, they will not see the chef details information
- This site has a lot of emphasis on design. So some great features have been given in this site. The data of various achievements of the company is shown with the number count up animation. Moreover, lazy loader is used in the image. So the site is well optimized.

### • ChakriLagbe [Live Link](#) | Github > [Client](#)

Technologies: ReactJs, TailwindCss, DaisyUI, React Router, Recharts.

- It is completely a front-end design base site. Backend features are not required on this website. Because this web application is created for job circular posts. Where the job will be released by the organization and applicants can apply as per company's requirements.
- Firstly, applicants will see all the job circulars in the job cart on the home page. Where some main information is given. If the applicant is compatible with the job, he can see the complete information by clicking on view details, and it will show him on the new page.
- On the job details page, the user will see the Apply Now button. If clicked, the application will be successfully applied, and applied jobs will be shown on the applied jobs page.

## EDUCATION

BSc in National University (Chemistry)

## LANGUAGE

BANGLA (native) - ENGLISH (basic)
